

Talk to EnkTel

Hands-free control over your entire IPTV experience — playback, browsing, discovery, and an IMDb-style knowledge assistant that stays in sync with your library.

This guide covers every voice command in EnkTel v1.12.0. Use the Mic button in the navigation bar, tap the Mic in the corner, or toggle **Hey Enki wake word** in Settings → Voice for hands-free use. The knowledge base draws directly from your synced playlist and EPG — refresh either one and the answers stay current.

TIPS & TROUBLESHOOTING

Wake word chirping

If Hey Enki triggers a mic chirp too often, keep the toggle off or use the Mic tab in the nav bar instead. The wake-word engine spaces its own listen turns 20 seconds to 3 minutes apart in a quiet room, and won't open the mic while playback audio is active.

Nothing happens when I speak

Grant microphone permission (Settings → App Permissions), and make sure a Google/OEM speech service is installed. Bluetooth headsets with dodgy mics can degrade recognition.

Titles it can't find

Voice knowledge comes from your synced library — if a title isn't there, say "refresh the playlist" and try again.

Battery

Hey Enki uses the system speech recogniser continuously; expect a measurable drain if you leave it on overnight.
